Earth is the third planet from the Sun and the only astronomical object known to harbor life. According to radiometric dating and other sources of evidence, Earth formed over 4.5 billion years ago. Earth's gravity interacts with other objects in space, especially the Sun and the Moon, Earth's only natural satellite. Earth revolves around the Sun in 365.26 days, a period known as an Earth year.

It is widely accepted that Mars had abundant water very early in its history, but all large areas of liquid water have since disappeared. A fraction of this water is retained on modern Mars as both ice and locked into the structure of abundant water-rich materials, including clay minerals (phyllosilicates) and sulfates. Studies of hydrogen isotopic ratios indicate that asteroids and comets ...

Plastic contamination is an increasing environmental problem in marine systems where it has spread globally to even the most remote habitats. Plastic pieces in smaller size scales, microplastics (particles <5 mm), have reached high densities (e.g., 100 000 items per m<sup>3</sup>) in waters and sediments, and are interacting with organisms and the environment in a variety of ways.

Die Aarde se toekomst is nou verbind aan dië van die Son. Helium is stadig maar seker besig om by die Son se kern op te gaar, wat sal veroorsaak dat die Son se ligsterkte stadigaan sal toeneem.

**Aarde - Wikipedia**

Die Aarde is die derde planeet van die Son en die enigste astronomiese voorwerp bekend om te huisves lewe. Volgens radiometrie datering en ander bronne van bewys, is die Aarde gevormde oor 4,5 miljard jaar gelede. Die Aarde se gravitasie wisselwerk met ander voorwerpe in die ruimte, veral die Son en die Maan, die Aarde se enigste natuurlike satelliet. Die Aarde draai om die Son in 365,26 dae, 'n tydperk bekend as 'n Aardejaar.

A group of geologists have drawn my attention to the 2010/2013 Geological Society of London's statement on climate change and asked if I could arrange an on-line discussion about it. The lead author of the

statements is Dr Colin Summerhayes who has participated as guest blogger and commenter on Energy Matters before. And so I asked if I could reproduce the statements on these pages and ...

### The Geological Society of London's Statement on Climate

Ziemia oraz pozostała planeta Układu Słonecznego powstała 4,54 ± 0,05 mld lat temu z mgławicy słonecznej – obłoku gazu i pyłu, który podczas powstawania Słońca przekształcił się w dysk. Z owego dysku miały powstać wszystkie planety oraz planetoidy. Najstarszy materiał, znaleziony w Układzie Słonecznym powstał 4,5672 ± 0,0006 mld lat temu.

Mysterious and often inexplicable remnants of civilization's history fascinate scientists and archaeologists. People travel worldwide to visit such sites, yet some of the most enigmatic artifacts and structures have been found right here in North America.

### Lost Arts Media Online – Mystery of America - Book 1

La formation de la Terre par accretion était presque terminée en moins de 20 millions d'années [11]. Initialement en fusion, la couche externe de la Terre s'est refroidie pour former une croûte solide lorsque l'eau commença à s'accumuler dans l'atmosphère, aboutissant aux premières pluies et aux premiers océans. La Lune s'est formée peu de temps après, il y a 4,53 milliards d'années ...

La Tierra (del latín Terra, [17] deidad romana equivalente a Gea, diosa griega de la feminidad y la fecundidad) es un planeta del sistema solar que gira alrededor de su estrella – el Sol – en la tercera órbita más interna. Es el más denso y el quinto mayor de los ocho planetas del sistema solar. También es el mayor de los cuatro terrestres o rocosos. ...
