The fundamental theorem of calculus is a theorem that links the concept of differentiating a function with the concept of integrating a function.. The first part of the theorem, sometimes called the first fundamental theorem of calculus, states that one of the antiderivatives (also called indefinite integral), say  $F$ , of some function  $f$  may be obtained as the integral of  $f$  with a variable bound ...

Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...
