The Journal of Mathematical Analysis and Applications presents papers that treat mathematical analysis and its numerous applications. The journal emphasizes articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, and engineering, particularly those that stress analytical aspects and novel problems and their solutions.

Journal of Mathematical Analysis and Applications

This book presents a unified treatment of many different kinds of planning algorithms. The subject lies at the crossroads between robotics, control theory, artificial intelligence, algorithms, and computer graphics.

The laws of science, also called scientific laws or scientific principles, are statements that describe or predict a range of natural phenomena. Each scientific law is a statement based on repeated experimental observations that describes some aspect of the Universe. The term law has diverse usage in many cases (approximate, accurate, broad, or narrow theories) across all fields of natural ...

This article discusses the history of the principle of least action. For the application, please refer to action (physics).. The principle of least action $\hat{\text{---}}$ or, more accurately, the principle of stationary action $\hat{\text{---}}$ is a variational principle that, when applied to the action of a mechanical system, can be used to obtain the equations of motion for that system.
